

Calculator Exercise

We want to create a web applicaiton that works as a simple calculator.

Use Grid for the calculator layout.

Calculator should appear in the center of the page.

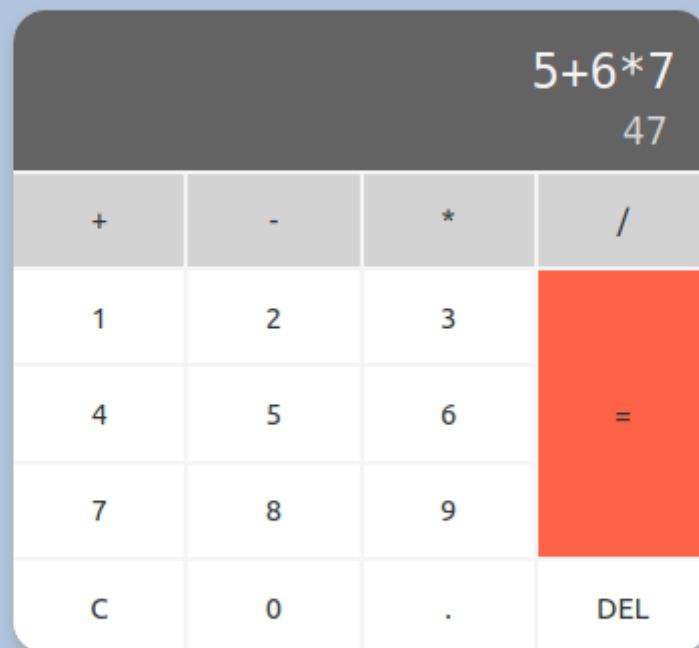

Image 1:

Starting point.

Display will have 2 rows:

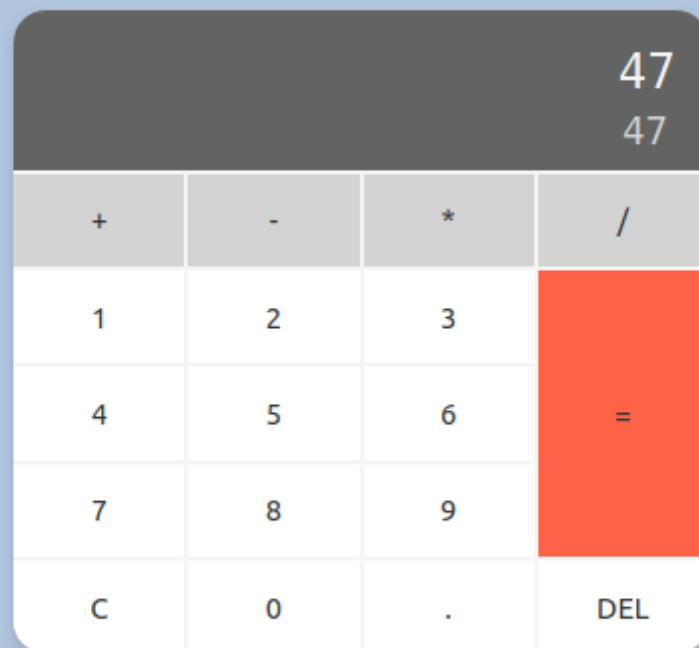

1. The math calculation you want to solve.
2. The result (changes "on the fly").

Image

2: Display rows.

Once "=" button is clicked, the result will show in both lines.

Image

3: '=' pressed.

C should restart the display.

DEL should remove the last character from the display.

Used colors

- #636363
- lightgray
- white
- lightsteelblue
- whitesmoke

Tips

- See **eval** function.
- Do not create a function to each button, think how you could simplify the code.
